As a junior front-end designer-developer, I am always looking forward to develop my skills and improve those which I already have. Create awesome things is my passion and I feel really curious about new technologies and features like CMS (Blog) or E-Commerce and how to develop them. Most of the programming languages that, in my past years, I could learn were obtained through researching and self-learning so, I could improve my few personal projects and make them better.

EXPERIENCE

2015
ANDROID DEVELOPER, TIMP.PRO (CO)

Internship. Main responsibilities:
- Develop and implement new features to the current project timp.pro.
- Learn important programming and human skills such as organization and time management
- Java was the language used to develop the project but I had the opportunity to research about iOS swift.

2013 – 2014
IT TECHNICIAN/WEB DESIGNER, IMACULADA COLLEGE

Internship. Two main responsibilities:
- Give maintenance to the actual hardware, which includes, fix and repair the current PC's of the college.
- Design the new website to the college because the old one needed a fresh design.
- Implement new features to the current website until the new one could be released.

EDUCATION

JUNE 2018
BTEC LEVEL 3 SOFTWARE DEVELOPMENT, GATESHEAD COLLEGE

Final qualification, DDM (Distinction, Distinction, Merit).
- C#, MySQL, HTML5, CSS, JavaScript were the main languages
- Final project to practice all the skills acquired during the year.
- Final documentation to explain the full process of development.

JUNE 2018
